

High-Grade Biochar

Animal feed additive

- Promote weight gain.
- Aid digestion.
- Boost immunity.
- Improve nutrient uptake.
- Adsorb toxins.

Due to biochar's permeability & extended surface area it reduces enteric methane emissions by enhancing gut microbial fermentation & growth of beneficial microbes in the gastrointestinal tract, which ultimately improves health & productivity.

Horses – 10 grams of biochar per Kg of DM

- support long-term gut health & immunity.
- Increases feed & energy efficiency.
- Reduces hoof issues.
- Overall improves health & appearance.

Cattle/Dairy – 5% of Biochar per Total DM

- Increases nutrient uptake.
- Improves productivity of cows.
- Reduces methane emissions.
- Reduces hoof issues.
- Reduces odor of slurry.
- Increases immunity to pathogens.
- Increases vitality.

Calves – Feed Biochar Adlib

- Increases growth.
- Prevents scours.
- Aids in the ability to resist pathogens, including gut pathogenic bacteria.
- Lowers mortality rate.

Sheep/Goats – 5% Biochar per Total DM

- Improves nutrition & diet selection.
- Influences performance.
- Reduces methane emissions.
- Increases growth rates.
- Increases milk protein and/or fat.
- Increases overall health.

Pigs – 3% Biochar per Total DM

- Improves nutrient digestibility & performance parameters in growing pigs.
- Reduces faecal E. coli counts in manure & increases the number of beneficial bacteria lactobacilli in feces.

Poultry – 1-2% Biochar per Total DM

- Improves eggshell thickness, strength & egg yield.
- Improves hygiene in coops through ammonia reduction, reduces incidences of footpad disease.
- Improves health & other issues related to manure production.

Dogs – 3% of Biochar per Total DM

- Improves nutrient digestibility & faecal quality.
- Reduces post-partum recovery time in bitches.
- Increases vitality, health & overall wellbeing.
